Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (currently amended): A method comprising:

automatically transferring time sensitive data from a first storage ~~coupled to~~ of a first processor-based system to a second storage ~~coupled to~~ of a second processor-based system, wherein the second processor-based system is located in a housing of the first processor-based system; and

automatically displaying said time sensitive data on a display ~~coupled to~~ of said second processor-based system at a predetermined time.

Claim 2 (currently amended): The method of claim 1 wherein said time sensitive data is automatically transferred from the first storage ~~coupled to the first processor-based system~~ when it is determined that the first processor-based system is being powered off.

Claims 3 – 5 (cancel)

Claim 6 (original): The method of claim 1 including providing real time clock information from said first processor-based system to said second processor-based system.

Claim 7 (cancel)

Claim 8 (currently amended): ~~An article comprising~~ A machine-readable storage medium ~~for storing~~ including instructions that when executed cause a second processor-based system to:

automatically receive ~~transfer~~ time sensitive data from a first storage ~~coupled to~~ of a first processor-based system [[to]] at a second storage ~~coupled to a~~ of the second processor-based system; and

automatically display said time sensitive data on a display ~~coupled to~~ of said second processor-based system at a predetermined time.

Claim 9 (currently amended): The article of claim 8 further storing instructions that cause [[a]] the first processor-based system to automatically transfer data from the storage coupled to the first processor-based system when it is determined that the first processor-based system is being powered off.

Claim 10 (currently amended): The article of claim 8 further storing instructions that cause [[a]] the first processor-based system to automatically transfer personal information manager information.

Claim 11 (currently amended): The article of claim 10 further storing instructions that cause [[a]] the first processor-based system to automatically transfer timed alerts.

Claim 12 (currently amended): The article of claim 8 further storing instructions that cause [[a]] the second processor-based system to automatically provide an audible alert at [[a]] the predetermined time.

Claim 13 (currently amended): The article of claim 8 further storing instructions that cause [[a]] the first processor-based system to provide real time clock information from said first processor-based system to said second processor-based system.

Claim 14 (cancel)

Claim 15 (currently amended): A processor-based system comprising:

a processor;

a first storage to store ~~storing~~ a personal information manager application; and

a second storage to store ~~storing~~ software including instructions that cause the processor to automatically transfer time sensitive data to ~~another~~ a second processor-based device ~~to automatically~~ for display of said time sensitive data at a predetermined time, said automatic transfer to occur in response to an indication that said processor-based system is to be powered off.

Claim 16 (currently amended): The system of claim 15 including a link on said system to said second processor-based device.

Claim 17 (currently amended): The system of claim 16 wherein said processor-based system is a portable computer that includes said second processor-based device.

Claim 18 (currently amended): The system of claim 17 including a display for said second processor-based device and a housing for said portable computer, said display being located on the outside of said housing.

Claim 19 (cancel)

Claim 20 (currently amended): The system of claim 15 wherein said processor is to automatically ~~transfers~~ transfer said time sensitive data to said second processor-based device when the processor detects that the processor-based system will be turned off.

Claim 21 (new): The method of claim 2 including powering said second processor based system using a power source of said first processor-based system when said first processor-based system is powered off.

Claim 22 (new): The method of claim 1 wherein said second processor-based system comprises a standby system.

Claim 23 (new): The method of claim 1 including automatically displaying said time sensitive data on said display of said second processor-based system located on an exterior of said housing.

Claim 24 (new): The method of claim 1 including automatically displaying said time sensitive data on said display of said second processor-based system while said first processor-based system is powered off.

Claim 25 (new): The system of claim 17, wherein said second processor-based device comprises a standby system.

Claim 26 (new): The system of claim 17, wherein said second processor-based device is to be powered on when said processor-based system is to be powered off.
